FIELD VISIT - 2019

The Final Year B.Sc. (CBZ) degree students of 2019-20 batch of SSES Mahasate Arts, Commerce and Science College went on a study tour to Vermicomposting Centre, Hosali Village, Mudgeri, Karwar on 15.09.2019.

The director of the centre explained the students that process of vermicomposting starts with the construction of a vermibed. The beds can be constructed of different sizes depending on the space available. If there is no shade, sheds have to be constructed above the vermi beds. Otherwise vermibed can be constructed under the shade of big trees like Neem. To construct a bed compost fertilizer must be used. Care should be taken to avoid plastic and glasses pieces in the compost which is used for vermibed. The bed should be sprinkled with water so that it is kept moist. If it is summer season more water must be sprinkled. Then selected earthworm species must be released on to the bed. The earthworms feed on the organic waste present in the bed. The excreta of earth worms are ejected through the anus in the form of faecal pellets or worm castings which look like sand crystals. In about 6 weeks some worm castings are seen on the surface of vermibed. In 3 to 4 months the bed is filled with rich black fertilizer.
